Money Talks, SCRIBE® Listens.

Scribe® 2.0 is the next generation of ASR, purpose-built to usher financial markets into a new era of voice technology.

The Challenge: Unlocking Valuable Insights from Unprocessed Audio Data

⚠️ **Rising Need for Business Intelligence:**

In today's data-driven landscape, there's a growing demand for extensive business intelligence. Untapped audio data represents a potential goldmine of information.

⚠️ **Inaccessible Financial Language:**

Current transcription engines struggle with financial jargon, limiting our ability to extract crucial insights from industry-specific conversations.

⚠️ **Audio Quality Hurdles:**

Poor audio quality, often exacerbated by compressed data files, presents a formidable barrier to accurate transcription. This impedes our capacity to gain meaningful insights from these audio recordings.

Addressing these challenges is not only a matter of improving efficiency but also holds the key to unlocking valuable insights, ensuring compliance, and staying ahead in the era of big data. It's time for us to transform these hurdles into opportunities for growth and innovation.

Introducing Scribe® 2.0:

State-of-the-Art Automated Speech Recognition and Machine Transcription

Scribe is the evolution of Greenkey Technology (acquired Nov. 2021). Completely re-engineered to provide the building blocks for tomorrows voice technology, today.

Transcription Tuned to Financial Conversations.

Over 95% accuracy on European languages and 80% on Asian languages.

50x Faster Batch Processing.

Compared to our previous technology even with our enhanced model.

**Multilingual and Accent Proof.**

Scribe® supports all major financial languages including EN, ES, PT, FR, DE, NL, IT, ZH-CN, ZH-HK, JP...

Automatic Language Detection.

Transcribe everything even when speakers switch language mid conversation.

Real Time Processing.

Display the output in your front-end/chatbot.

The engine that powers our platform is now yours.
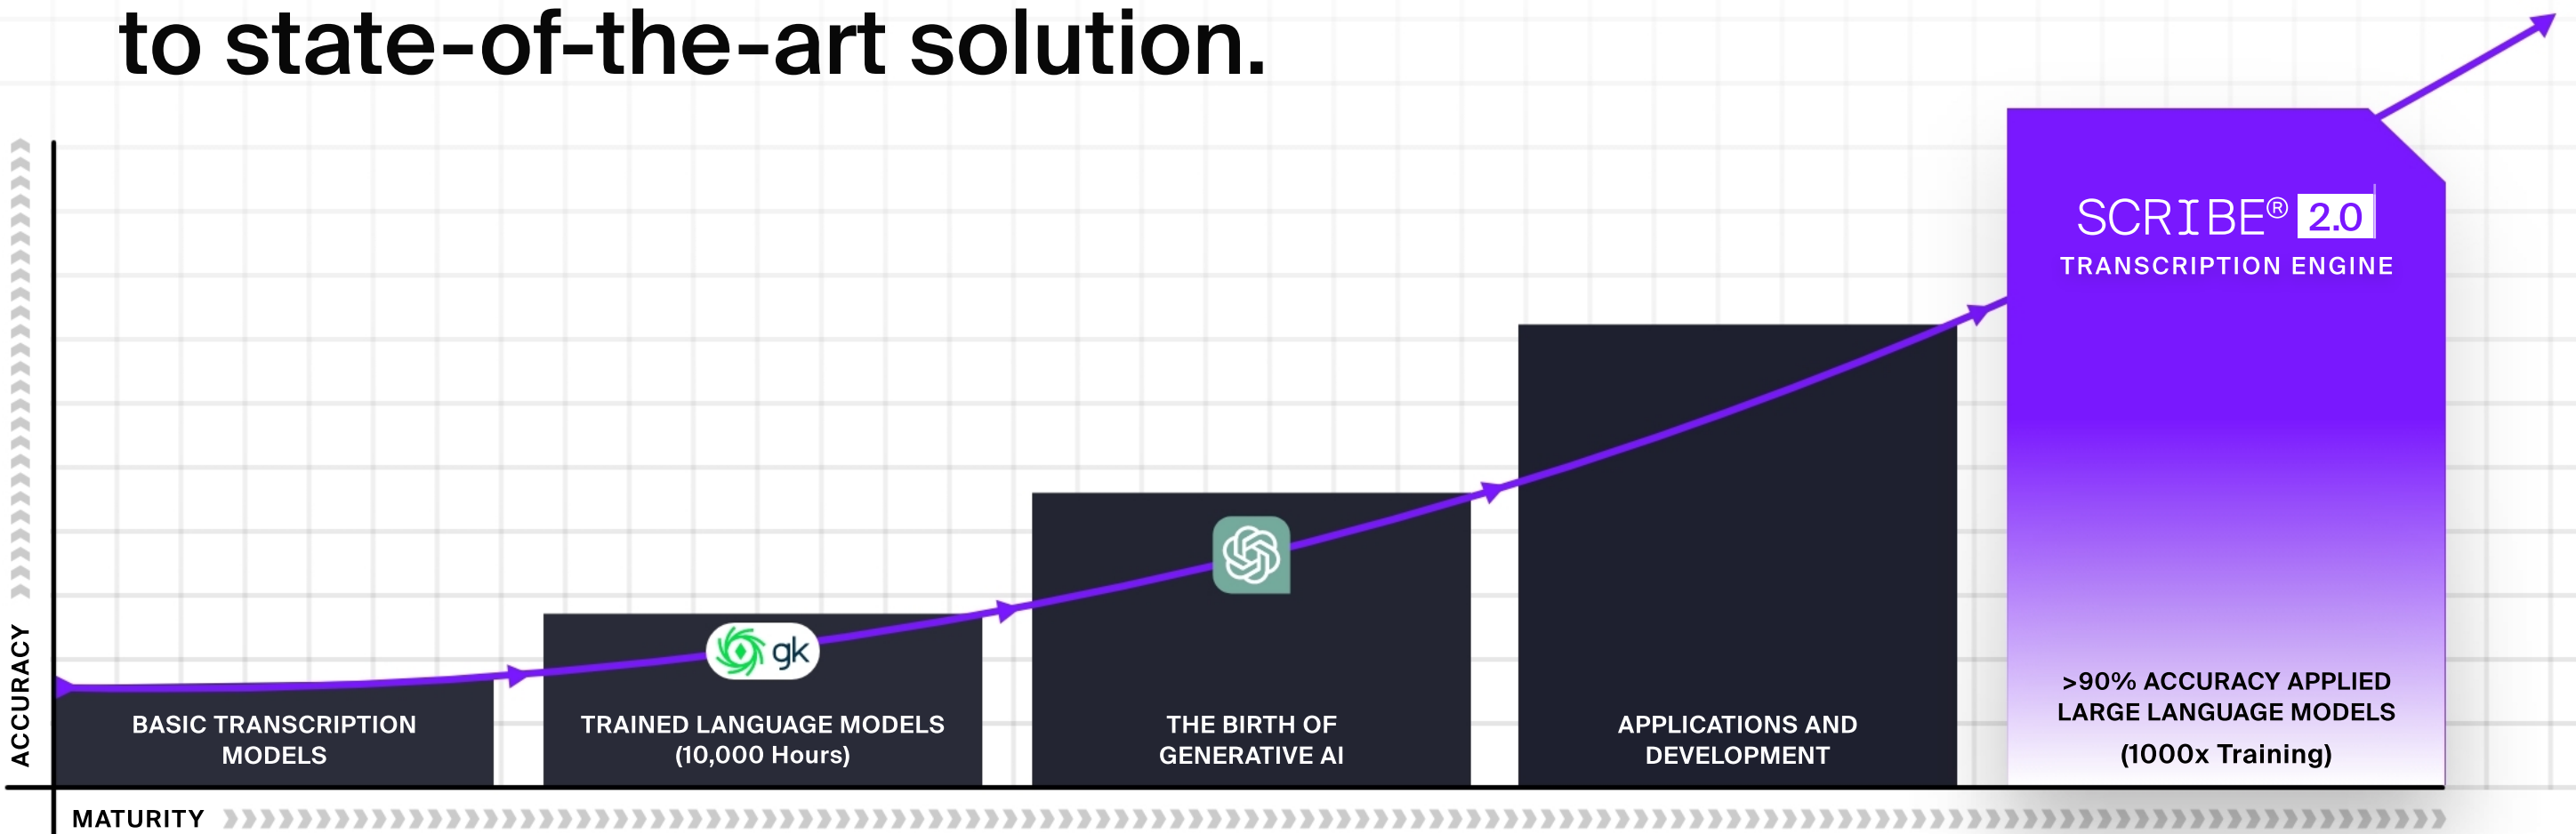

SCRIBE® 2.0 STANDALONE

- **Financial Jargon Recognition:**
  Accurate transcription of industry-specific terminology, vital for front office professionals.

- **Speaker Identification:**
  Helps traders, advisors, and analysts track conversations and decisions.

- **Timestamping:**
  Precise timestamps are essential for compliance and order execution.

- **Data Privacy & Security:**
  Ensures sensitive financial data remains confidential and secure.

- **Multilingual Support:**
  Allows for transcription in multiple languages for international transactions.

- **Integration with Financial Software:**
  Streamlines data processing and analysis, enhancing efficiency.

- **Adaptability to Audio Quality:**
  Handles various audio sources, such as calls, video conferences, and meetings.

- **Search & Analytics:**
  Quick information retrieval for research, compliance, and decision-making.

- **Scalability:**
  Handles the growing volume of audio data generated by the front office.

VoxSmart

VoxSmart Mobile Capture (VSP)

- Transcribe all the calls captured by VoxSmart Mobile Voice Recording
- Search within the transcripts and playback areas of interest directly from the VSP

VoxSmart Communication Surveillance (VCS)

- We improve the overall performance of our compliance workflow by significantly reducing the time it takes to process the hundreds of hours of audio generated each day
- The much higher accuracy of the transcription is reflected in the quality of our AI and NLP outputs, significantly reducing the number of false positives and manual review work

VoxSmart Data Insights (VDI)

- Integrated in our VDI platform, Scribe® allows for much better results when detecting quotes, analysing counterparty relationships and overall sentiment
